

TAMS II

Version 3.04.04.00

What's in this release

- When manufacturers partially cancel purchase orders, the order quantity is now reduced by the cancellation quantity.
- Standard delivery code numbers and names are now available in TAMS II in preparation for Store Console 2.0.
- Pick up where you left off when invoice picking sessions are interrupted on RF Scanners.

See below for details on all improvements and fixes in this release.

Improved

Back Office

Purchase Orders

[TAMSIIIS-2233](#)

When parts on a purchase order are partially canceled by the manufacturer, the order quantity is reduced by the cancellation quantity. This ensures cross dock store details are retained when the purchase order is posted.

Customer Accounts

[TAMSIIIS-2006](#)

Standard delivery code numbers and names are now available in TAMS II. Delivery codes are standardized by service level. When assigned to priority customers, the codes are used to anticipate delivery times for parts ordered through NAPA Xpress.

The standardized priority names: Platinum, Gold, Silver, Bronze, and Default names cannot be edited.

Code	Name	Minutes for Delivery
5	Default	120
6	Platinum	30
7	Gold	45
8	Silver	60
9	Bronze	75

- **Code** number and **Name** are standard by service level and cannot be changed.
- **Minutes for Delivery** for each code can be changed.

Delivery codes have been standardized in preparation for the release of **Store Console 2.0**.
